

ARTURO DELGADO

Chantilly, VA | [linkedin.com/in/arturo-builds-infra](https://www.linkedin.com/in/arturo-builds-infra) | arturo@xops.engineer

PROFESSIONAL SUMMARY

Senior Site Reliability & Infrastructure Engineer with 7+ years of experience building scalable, high-uptime cloud infrastructure. Proven track record in 24/7 production on-call environments, architecting automation frameworks, and eliminating operational overhead. Expert in AWS/GCP, Kubernetes, and GenAI-driven automation, with a deep focus on system reliability and incident response.

PROFESSIONAL EXPERIENCE

Platform Science - San Diego, CA

June 2019 - Present

Senior Infrastructure Engineer | April 2024 - Present

Infrastructure Engineer | October 2021 - April 2024

Software Development Engineer | June 2019 - October 2021

- Spearheaded integration of GenAI-driven automation (Claude Code, n8n) into infrastructure workflows, reducing request-to-completion time for environment provisioning by 80%
- Participated in a 24/7 on-call rotation using PagerDuty for 4+ years, leading incident response for high-severity outages and conducting blameless post-mortems to improve system resilience and maintain high uptime
- Architected custom GitOps framework for Kubernetes using ArgoCD plugin with gomplate templating - automating deployment of core infrastructure components across 8 production clusters with automatic cluster discovery, eliminating manual bootstrapping processes and enabling zero-touch provisioning of new clusters
- Engineered automated blue/green RDS migration system to bypass AWS in-place storage limitations, incorporating intelligent sizing calculations based on storage delta analysis, cross-team dependency management (parameter groups, binlog retention), and table optimization via ALTER operations - reducing manual overhead from 8 hours to 45 minutes per instance and saving ~\$100K annually across first two deployment groups
- Led cross-functional cache optimization initiative to address recurring memory incidents (90%+ utilization), auditing TTL strategies and data retention policies across teams - rightsizing ElastiCache instances to optimal capacity utilization and reducing annual costs by \$15K while improving system stability
- Built and maintained Terraform infrastructure-as-code modules for multi-cloud environments (AWS, GCP, Azure), enabling consistent provisioning patterns and reducing deployment errors across engineering teams

- Designed and implemented comprehensive observability stack using Prometheus, Loki, and Grafana for Kubernetes monitoring, providing real-time visibility into cluster health and application performance
- Developed CI/CD automation pipelines using GitHub Actions and Jenkins, streamlining deployment workflows and reducing time-to-production for infrastructure changes
- Led and standardized team-wide documentation practices across Confluence, Backstage, and repo READMEs; authoring on-call runbooks, architectural diagrams, and platform guides to accelerate onboarding for dev teams and new hires while also integrating it into HappyFox AssistAI to auto-route support requests to relevant documentation, reducing manual team interactions in the support channel by +80%

TECHNICAL SKILLS

Cloud & Orchestration: AWS (primary), GCP, Azure, Kubernetes, Docker, ArgoCD, Flux CD, Helm

Infrastructure as Code: Terraform, CloudFormation, GitOps

GenAI & Automation: Claude Code, n8n, GitHub Actions, Jenkins, Python, Bash

Observability & Networking: Prometheus, Grafana, PagerDuty (On-call), TCP/IP, DNS, TLS/SSL, ALB/NLB, AWS WAF, Route53

Databases: RDS (MySQL, PostgreSQL), ElastiCache (Redis)

Development: Python, PHP, JavaScript, RESTful APIs, Linux Administration

EDUCATION

Platt College San Diego

B.S. in Media Arts | 2004 - 2008

- Specialized degree in Web Design
- Specialized degree in Digital Video Production
